

AEROSOL SPRAYS

PRODUCT MODEL	SCOPE OF APPLICATIONS
S-88 - PAINTABLE/NON-PAINTABLE (SILICON MOLD RELEASE)	Used as a standard, highly effective mold release agent to prevent plastic and rubber from sticking to molds, Optional for paintable or non-paintable versions.
NS-77 (NON-SILICONE MOLD RELEASE)	This non-silicone aerosol functions as a high-performance mold release agent primarily used when the molded parts require painting, plating, or other secondary finishing operations.
S-22 (DEGREASER MOLD CLEANER)	A heavy-duty spray formulated as a degreaser and mold cleaner to quickly dissolve and remove grease, oil, and resin build-up from mold cavities and components.
SC-99 (SOLVENT CLEANER)	A powerful solvent cleaner used for general industrial cleaning and degreasing to remove heavy contaminants, oils, and grime from machinery and components.
SR REMOVER (RESIN & GAS MARKS REMOVER)	A specialized spray used to remove troublesome residues such as resin deposits and burnt-on gas marks from mold surfaces in the plastics molding process.
PRO COTE - GREEN (ANTI CORROSION FILM)	Used to apply a green, protective anti-corrosion film for long-term protection of mold cavities, dies, and machined metal surfaces during storage or shipment.
PRO COTE - WHITE (ANTI CORROSION FILM)	Used to apply a white, easily visible, protective anti-corrosion film for mold and metal part protection during medium to long-term storage.
LUBE GUARD/LUBE GUARD - LEMON SCENT (LUBRICATES & DISPLACES MOISTURE)	A multi-purpose spray that effectively lubricates moving parts and instantly displaces moisture from electrical and mechanical components to prevent corrosion and sticking. Optional with lemon scent
PRO SHIELD - BLUE/GREEN (ANTI CORROSION FILM)	Used to create a blue or green-tinted, heavy-duty anti-corrosion film to safeguard highly-finished metal surfaces, tools, and molds against rust and oxidation.
EP LUBE (NON-STAIN EJECTOR PIN LUBRICANT)	A specialized, clean lubricant designed to ensure the smooth movement of ejector pins in plastic injection molds without staining the plastic parts.
MOLY LUBE (WIRE-ROPE & CHAIN LUBRICANT)	A heavy-duty lubricant containing Molybdenum Disulfide (MoS_2) to penetrate and protect heavily loaded wire ropes and industrial chains against wear and corrosion.
SG-18 (SPRAY GREASE)	A convenient spray grease used for precision application on general lubrication points like bearings, hinges, and cams, providing long-lasting, heavy-duty lubrication.
E.C.C (ELECTRO CONTACT CLEANER)	A fast-drying, non-residue electrical contact cleaner used for removing dirt, flux, oil, and contaminants from electrical contacts, switches, and circuit boards.
SUPERTAP (HEAVY DUTY CUTTING LUBRICANT)	An extreme-pressure (EP) aerosol designed as a heavy-duty cutting lubricant for difficult machining, threading, tapping, and drilling operations on tough metals.
SYNTHEAN-LUBE (FULLY SYNTHETIC CHAIN LUBRICANT)	A high-performance, fully synthetic chain lubricant formulated for high-temperature and high-speed industrial chains, offering low-wear and extended re-lubrication intervals.
BELT DRESSING (INDUSTRIAL BELT LUBRICANT)	Used as an industrial belt lubricant to penetrate the fibers of flat, round, and V-belts to renew flexibility, prevent slippage, and extend the service life of the belt.
